

Lead and develop manufacturing with data

Factory Cockpit brings together data from your shop floor devices and IT systems for real-time situational awareness.

Your People

Bring out the best in people. Let them know what should happen, when and why. Enhance work satisfaction and productivity.

Your Production

Continuously improve manufacturing and solve productivity bottlenecks using real-time data and information from shop floor devices and IT systems.

Your Partners

Timely information sharing, adjustments, and issue management across the value chain, thus enhancing internal and external collaboration.

Features & Benefits

1. Effective operations through timely transparency

Resource status, utilization, OEE reports and analysis.

2. Utilize the existing information

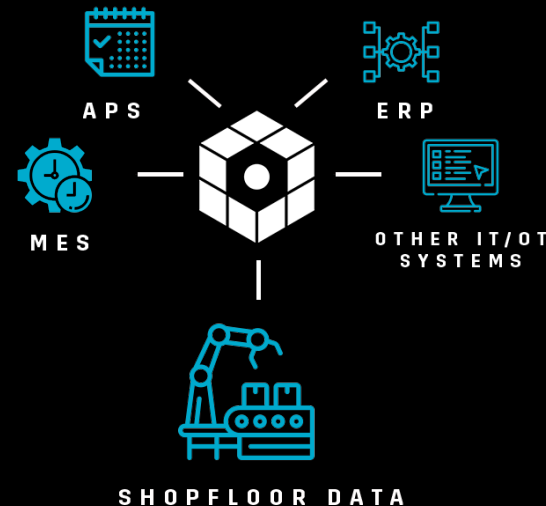

Standardized interfaces for machine tools and existing production information systems.

3. Remove bottlenecks, and improve production

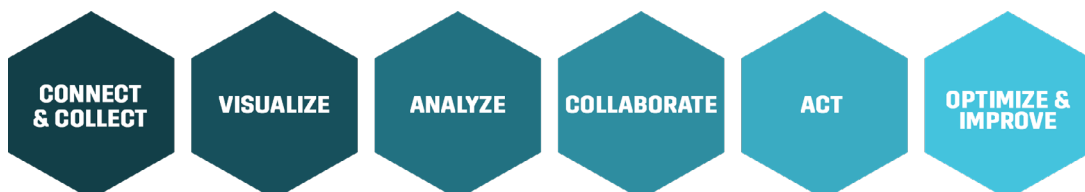

Comprehensive production KPI reports and analytics. Insights for production plans and flows.

4. Make data-informed decisions

Cloud based solution integrating data across sites and factories.

Make the data work for you
