# ONE SOFTWARE COMBINING KEY FUNCTIONS OF MES AND APS

## Work Cell Operations

### Perfecting your part manufacturing

Combining key functions of MES and APS, Work Cell Operations is bringing benefits of paperless production, decreased order-to-production time and transparent data at your fingertip! The software has flexible connection and integration options that enable combining various different non-automated and automated equipment under the same control - including any Fastems automation systems that you may have.

### Comprehensive planning & execution software for your production

Quick Order to Production

Enhanced Production Scheduling

Part Master Data Library

Material Logistics

Real-time Dashboard

Production Documents

### Main functionalities

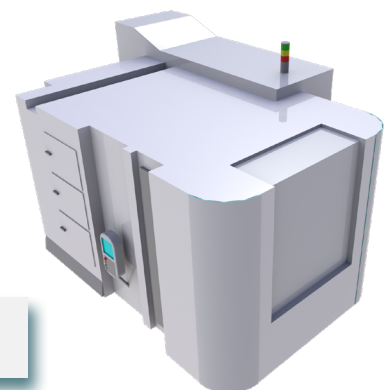

Plan & schedule production • Automatic work queues • Capacity estimates • Inventory management • Transfer tasks between cells • Setup management • Order progress estimate • Production history • Digitalized documents • Dashboards

### Optional Additional Modules

Real-time machine monitoring

NC program management and tool data reading

Complete tool data management
